Art Unit: 2816

1. The disclosure is objected to because of the following informalities: on page 9, line 14, "a load" (second occurrence) should be deleted.

Appropriate correction is required.

2. The drawings are objected to because in Fig. 1, it is not clear why node 122 is referred to as an input voltage of the sense amplifier, i.e., it appears to be an output terminal since it is taken at the drain of FET 104.

Applicant should clear up this ambiguity in response to this office action, i.e., where does voltage signal SAIN come from/go to?

Fig. 1 is also objected to because the depiction of the NFETs 104, 106 and 108 is misleading, i.e., the small circle shown at their respective gate inputs should be removed (this designation implies that they are PMOS type FETs which is not the case).

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure

Art Unit: 2816

number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

3. Claims 1-20 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In independent claims 1 and 14, it cannot be determined what is meant by "intrinsic" FETs, i.e., this is

Art Unit: 2816

not a term of art, and has not been defined by applicant is the instant specification.

In each of the independent claims, it cannot be determined if the "target memory cell and bit line" set forth on the first three lines are part of the claimed invention or not. It appears that they are merely intended use and thus are not part of the claimed invention, but applicant should clarify this point in response to this office action so that no ambiguity exists. Note also that claim 6 implies that the target memory cell is in fact part of the claimed invention.

In claim 4, the term "corresponds" is vague and indefinite, i.e., it cannot be determined how the control signal DCNT and the voltage on bit line 116 "correspond" to each other.

3. Claims 1-20 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action.

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
